

Series: 14002 Type: HS50

HS50 Clinch Press

The HS50 is a manual press for self-clinching fasteners with a throat depth of 85 for studs, nuts and standoffs from M2 to M8. It is characterised by extremely simple construction, high lever operating/pressing force ratio and the highest safety while working. The HS50s main feature is that it is quick and easy to interchange and adjust the punches and dies. Also it doesn't require a power source thank to the lateral lever that can create a large amount of pressure.
